

Statewide Policy: 8260 Physical Security Protections

What?

This policy outlines the physical security measures required to protect state agency information systems and the sensitive data they hold. It covers a wide range of protections, including:

● Physical Access Control:

- Controlled access to sensitive areas
- ID verification (e.g. badging or credentials)
- Visitor management

● Physical Security

Measures:

- Secured entry (e.g. locks, keypads, and/or security guards)
- Surveillance cameras
- Intrusion detection (systems and alarms)
- Secure physical network infrastructure
- Secure endpoints

● Environmental Controls:

- Maintain appropriate temperature and humidity levels to protect equipment
- Fire detection and suppression systems
- Dependable backup power sources
- Protect against water damage and other environmental threats

● Other Security

Measures:

- Securely storing and transporting equipment.
- Establishing procedures for alternate work sites in case of emergencies.
- Regularly inspecting facilities and equipment to ensure security.

When?

This policy is in effect at all times.

Why?

The goal is to:

- Prevent unauthorized physical access to systems and data, reducing the risk of theft, damage, or disruption.
- Protect systems and data from environmental threats like fire, water damage, and power outages.
- Ensure the availability, integrity, and confidentiality of government information and technology resources.
- Comply with relevant State and Federal laws and regulations.

Who?

All State agencies, their employees, and the facilities that house their information systems.

How?

Agencies must:

- Conduct Risk Assessments
- Develop and Implement Security Plans
- Train Staff
- Regularly review access logs, surveillance footage, and other data to identify and address security issues.
- Keep records of security plans, procedures, incidents, and inspections.

Remember:

- Combining physical measures, access control, and environmental protection is a best practice.
- Agencies must tailor their security measures to the specific risks and vulnerabilities they face.
- Strong security awareness and training are essential for all personnel.
- The policy is regularly updated to reflect changes in technology and security best practices.
